MEDIA CONNECT

MediaConnect Ltd is a New Zealand company specialising in medical vision, sound and control systems.
Our emphasis is on integrating these systems in operating suites. Although we have focused on this area in recent years, we have the capability to action a wide range of electronic and telecommunication projects.

Our aim is to present practical, effective solutions for the current requirements of our clients. Where appropriate, we will also install a cabling infrastructure to simplify future equipment installation.

Our “Visual OR” control product is an excellent example of how we can simplify the integration of these systems.
It is a customised touch screen remote control which enables the commonly used facilities in the OR to be controlled from a central position, without the operator entering the sterile field.

MediaConnect is based in Auckland, New Zealand. We have a team of technical staff experienced in design, installation and support of operating room imaging and audio electronics.

Our products and services recognise key advances in technologies and facility requirements.

- Image quality is rapidly improving.
- Surgical staff have a range of imaging sources both ‘live’ and ‘captured’ to view on surgical monitors, including endoscope, PACS and In-light cameras.
- Image sources need to be switched to surgical monitors on demand without staff entering the sterile field to touch monitors.
- Vision and sound maybe required on monitors in seminar rooms for training.
- Control systems need to be simple and straightforward for ease of use. They also need to be compatible with multiple supplier brands.
- While there may be a simple solution for a current requirement, planning ahead for future development is an important service.
- A client must receive excellent communication and support.

Installations at:

- Anglesea Hospital
- Ascot Hospital
- Auckland City Hospital
- Chelsea Hospital
- Endoscopy Auckland
- Mercy Hospital, Auckland
- Middlemore Hospital
- North Shore Hospital
- NSH Elective Surgery Centre
- Oasis Surgical
- Ormiston Hospital
- Southern Cross Hospitals:- Brightside, North Harbour, Hamilton Wellington
- Saint Georges Hospital, Christchurch
- The Saint George Hospital, Sydney

VISUAL OR

Integrating medical visual and audio devices in your OR

Our ‘Visual OR’ control system simplifies the integration of various systems within the operating room. It is a customized touch screen LCD remote control which enables the commonly used facilities in the OR to be controlled from a central position, without the operator having to enter the sterile area.

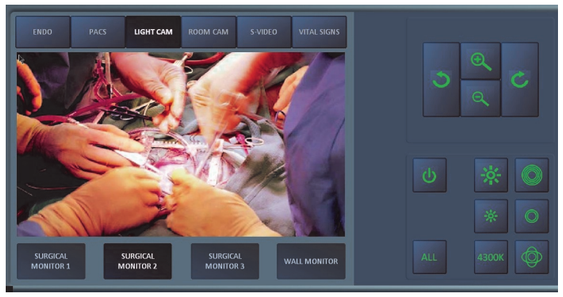
Are you upgrading or building a new OR?

- Integrating Visual OR Equipment – whether your needs are simple or complex, we will work with you to find an economical solution.
- Future-proofing – we will install cabling for your current requirements and future additions.
- Remote control – LCD touchscreen to centralise and simplify control.

An emerging scenario….

You’re purchasing a new Endoscope.
High definition images require one or more new LCD/LED monitors.
Surgical staff prefer them mounted on movable, suspended arms to enable easier viewing.

Film based imagery for Xray, CT, MRI and Ultrasound is becoming less common.
Digital imaging from PACS or DVD is being viewed in the OR.



Your new surgical lights have a camera included for viewing external procedures.
To aid preview prior to image capture, the surgeons need to see the camera view on their monitor..

The Visual OR touchscreen remote control enables any video source to be switched to any monitor, easily, without entering the sterile area.

Optional facilities:

- Music system with IPOD/MP3 input.
- Large wall monitors – for DVD, Endo, PACS, Lightcam view.
- Room view camera – with pan tilt zoom control.
- Audio/video connection to external viewing room.
