OUR HISTORY

Since its inception in 1889, Denyers has always followed the same philosophy – to produce the highest quality product range without compromise and to be leaders in their design and manufacture. We at Denyers strive to improve our product range to the benefit of our customers, adjusting to the requirements of the international market where differences in surgical techniques place other demands on equipment design.

Denyers have a historical commitment to excellence and product life, which in turn ensures lifetime protection for the customer's investment.

With over 125 years of service to the medical profession, we have always listened to our customers' wants and needs and this is why Denyers have become a premier manufacturer of operating theatre products.

Today Denyers is small enough to be flexible yet large enough to implement change quickly with a constant eye on the benefits to our customers, combined with an unwavering policy of engineering excellence.

"Excellence since 1889"

OUR MISSION

As a medical device company, we seek to lead the field with Australian designed, manufactured and serviced operating theatre products and to complement our own products with high quality offerings from international designers and manufacturers to ensure we can offer our customers the best possible solutions.

We embrace the ever-changing healthcare environment and aim to explore new opportunities as they arise. We commit to building close relationships with our customers in order to understand their needs and to provide them with exceptional service and solutions. Our employees are proud to be a part of an innovative and enthusiastic team.

We support our customers so they can provide the best in patient care.

Denyers is 100% Australian owned and operated.

DESIGN & DEVELOPMENT

Over 125 years of working with Surgeons, Anaesthetists, Nurses and other medical specialists has given us at Denyers a unique insight into their requirements. This unrivalled knowledge is reflected in the quality of the products we produce.

Denyers have a modern 3D CAD design and modelling department, a comprehensive mechanical workshop, electronic workshop and in-house upholstery department, meaning we can design and manufacture almost any accessory or support that may be required.

The success of our products in the marketplace bears testimony of their ability to address and resolve today's varied and challenging surgical requirements. Our designs undergo rigorous testing so our customers have peace of mind that all Denyer products meet the safety standards put in place by various governing bodies.

From a quality assurance perspective, Denyers International is certified to both ISO 9001:2015 and ISO 13485:2003

SERVICE & SUPPORT

The primary aim for us at Denyers is to ensure that our customers get as close to 100% up-time and maximum possible benefits from their investment, and to this end Denyers recommend comprehensive regular servicing of all products.

Denyers run a 24/7 call desk for contract service customers with guaranteed call-back and on-site response times. In the geographic areas where Denyers do not supply direct representation, this is handled by factory trained and certified specialist service organisations.

Denyers guarantee ex-stock delivery of all spare parts for a minimum of ten years from date of manufacture, ensuring maximum up-time for your investment. In fact, spare parts are regularly supplied for Denyer operating tables manufactured over thirty years ago – testimony to both the design and manufacturing of the original product and Denyers' dedication to long-term product support.

SURGICAL TABLES

Denyers' principal manufacturing activity is centred around the conception, design, manufacture and commissioning of operating tables and accessories. To provide a complete package for our customers we complement our own products with product from some of the world's leading manufacturers in the surgical equipment field, including Allen Medical, Anetic Aid, KLS Martin, ACEM and quite a number of others who service niche markets.

Full detail of all product and services supplied can be found on the Denyers website denyers.com.au along with certified sales and support organisations servicing all geographic areas.

XRT6000 SLIDE TOP OPERATING TABLE

With superior maximum and minimum heights, an advanced hand control unit, a 'safety first' emergency override feature, combined with class leading weight capacity, the XRT6000 is the flagship of the Denyer Range.

XRT5000 SLIDE TOP OPERATING TABLE

The XRT5000 is a table that suits all disciplines of surgery with an impressive height range and articulations, along with full lift and articulate patients weighing 300kg.

XRT4000 SERIES OPERATING TABLE

The XRT4000 offers hospitals the flexibility to find a solution ideal for their needs when budget must be a consideration, but without any compromise to functionality or quality.

The XRT4000 series is available in a number of configurations offering solutions for most operating needs.

ACCESSORIES

To match the world-class standard of our operating tables, Denyers offer a broad range of in-house developed and third-party accessories, partnering with global leaders to give hospitals the most comprehensive selection possible.

PENDANTS, THEATRE LIGHTS, CAMERAS & INTEGRATED THEATRE

PENDANTS

The idea of using swivelling ceiling mounted pendants to have equipment and medical gases readily available for patient treatment has long proved successful.

Flexible positioning, optimum utilisation of space in the operating room and intensive care unit as well as the requirements of hygiene and safety speak in favour of this solution. Denyers offer a range of pendants to suit the needs of any modern hospital.

THEATRE LIGHTS

Theatre lights need to be easy to set, offer optimum lighting conditions for all types of surgeries and allow a wide range of adjustments, such as colour, focus, field size and shape. This allows clinicians to achieve the clearest possible view of the operative site. Our lights offer the ability to be fully customisable with additional monitor arms and cameras.

Denyers offer complete solutions through our long-term partnerships with KLS Martin, Acem and others.

CAMERAS

Fast, accurate and high-resolution information is vital in many surgical, endoscopic and other imaging interventions and procedures. Utilising the latest digital documentation technology for capturing images or surgical procedures and live operations is nowadays exponentially growing in importance. Denyers range of surgical cameras complement our own range of lights, or they can be installed separately.

INTEGRATED THEATRE

Integration in the operating theatre is the management and distribution of patient data and images as well as the ergonomic location and application of devices such as control panels, surgical lighting, ceiling support units, monitors and recording/distribution units. We at Denyers and our partners can provide a solution from the most basic to customised absolute state-of-the-art.

PRESSURE RELIEF & CONSUMABLES

Pressure sores emanating from inadequate pressure relief during lengthy operations are stressful for patients and resource-hungry and expensive for post-operative care so we at Denyers have developed an extensive range of pressure relief gels, mattresses and supports. Denyers also offer bespoke positioning solutions if off the shelf product is not appropriate or optimal for a specific requirement, where we use the most advanced pressure-mapping equipment available.

Denyers offer a comprehensive range of both re-usable and disposable positioners, covers and devices. A complete catalogue of our offerings can be viewed on the Denyer website www.denyers.com.au
